

Wagerly

Instant micro-prediction markets for everyday moments, settled in seconds on Solana

The Problem & Our Solution

Prediction markets are too slow and complex for casual fun betting among friends or stream communities.

- Existing platforms feel like serious DeFi trading, not casual fun.
- Friends and streamers want instant, low-stakes bets on everyday moments.
- Wagerly lets anyone create a yes/no market in seconds on Solana.
- Group pools settle automatically via oracle or majority vote.
- Built for fun and speed, not complex trading strategies.

How It Works

From creating a market to instant payout, Wagerly runs entirely on Solana for speed and low fees.

- User creates a yes/no market with a question and timer in one tap.
- Market link shared via Discord, Twitch, or X for others to join.
- Participants bet USDC into a shared pool using Solana Pay.
- Switchboard oracle or group majority vote resolves the market.
- Anchor program settles payouts automatically to winners on-chain.

Built with

Solana, Anchor, Next.js, Solana Pay, Switchboard oracle, Discord bot integration, USDC

Why Now & What's Next

Solana's speed and low fees match today's social, stream-driven betting culture.

- Fast, cheap Solana transactions make micro-betting practical for everyone.
- Streaming and Discord communities are hungry for interactive, fun betting tools.
- Next: creator-hosted markets with revenue share for streamers.
- Next: deeper Twitch and Discord bot integration for live audience betting.
- Next: token-gated private leagues and tournaments.
